

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (Previously Presented) A liquid crystal display module for a notebook computer, comprising:

a liquid crystal display panel;

a light guide panel converting incident light from a light source to a flat type light, wherein the converted light is directed toward said liquid crystal display panel;

a main support containing said the liquid crystal display panel and said the light guide panel; and

having a protrusion projecting a fixed distance from a surface of the main frame; a reflector wrapping a bottom surface of the light guide panel and having a first hole to receive the protrusion of the main support; and

a bottom cover wrapping a rear surface of the reflector and side surface and a bottom of the main support and having a second hole to receive the protrusion of the main support,

wherein the protrusion of the main support penetrates the second hole in the a bottom cover via the first hole in the reflector.

2. (Previously Presented) The liquid crystal display module according to claim 1, wherein said clamping member includes:

a protrusion projecting a fixed distance from a surface of said main support; and  
a hole formed in the reflector receiving said protrusion.

3. (Original) The liquid crystal display module according to claim 2, wherein the protrusion includes a boss.

4. (Previously Presented) The liquid crystal display module according to claim 1, further comprising:

an optical sheet between said liquid crystal display panel and said light guide panel diffusing light passing through said light guide panel and adjusting a direction of the light;

a top case wrapping a side surface of said main support and said bottom cover, and wrapping an upper edge of said main support.

Claim 5 (Canceled).

Claim 6 (Canceled).

7. (Currently Amended) The liquid crystal display module according to claim 4 [[6]], wherein the protrusion includes a boss.

8. (Previously Presented) The liquid crystal display module according to claim 1, wherein said main support includes a guide surface engaged with a part of the reflector fixing said reflector in the horizontal direction.

Claims 9-23 (Canceled).

24. (Previously Presented) A liquid crystal display module for a notebook computer, comprising:

a main support; having a protrusion extending a predetermined distance from a surface of the main support;

a liquid crystal display panel adjacent to said the main support, the light guide panel having a first surface; and

a reflector having a second surface adjacent to said the first surface, the reflector includes a first hole for receiving the protrusion in the second surface; and

a bottom cover being adjacent to the reflector and the main support, the bottom cover includes a second hole for receiving the protrusion.

Claim 25 (Canceled).

Claim 26 (Canceled).

27. (Previously Presented) The liquid crystal display module according to claim 24, further comprising a liquid crystal display panel adjacent to said light guide panel and main support.

28. (Previously Presented) A liquid crystal display module for a notebook computer, comprising:

a bottom cover;

a light guide panel;

a reflector adjacent to the bottom cover and the light guide panel, the reflector including a first hole; and

a main support being adjacent to the bottom cover; and having a protrusion extending a predetermined distance from a surface of the main support and engaged with the first hole;

wherein the bottom cover includes a second hole for receiving the protrusion.

Claim 29 (Canceled).

30. (Currently Amended) The liquid crystal display module according to claim 4 [[6]], wherein the height of the protrusion is not greater than the sum of a thickness of the reflector and a thickness of the bottom cover.

31. (Currently Amended) The liquid crystal display module according to claim 24 [[26]], wherein the height of the protrusion is not greater than the sum of a thickness of the reflector and a thickness of the bottom cover.

32. (Currently Amended) The liquid crystal display module according to claim 28 [[29]], wherein the height of the protrusion is not greater than the sum of a thickness of the reflector and a thickness of the bottom cover.

33. (Original) The liquid crystal display module according to claim 24, wherein:  
a portion of the reflector is laterally extended away from the light guide panel; and  
the first hole is included in the portion of the laterally extended portion of the reflector.
34. (Original) The liquid crystal display module according to claim 28, wherein:  
a portion of the reflector is laterally extended away from the light guide panel; and  
the first hole is included in the portion of the laterally extended portion of the reflector.
